

Remanufactured Cartridges - Go Green! Save Green!

Make the Switch and Lower Your Printing Costs

With a challenging economy and rising expenses, you are probably looking for ways to cut extra costs. By making the switch to remanufactured ink and toner cartridges, you can save up to 65% over OEM. And, when you make the switch, it is likely for good! According to a report from the Boston-based research firm, Lyra Research, Inc., almost 80 percent of the businesses that switched to remanufactured cartridges found them to be equal to or exceed OEM performance.

Quality, Reliability, Value

By utilizing industry-leading R&D labs, ISO 9001-certified production facilities, and state-of-the-art robotics and automation technology in the remanufacturing process, our imaging supplies offer consistent, reliable performance at a fraction of the cost of OEM supplies. Our broad and deep product selection of mono, color laser, and extended yield toner cartridges, inkjet cartridges, bio-based toner, postage supplies, printer parts, and MICR solutions is compatible with all the leading brands including: HP, Canon, Brother, Dell, Lexmark, Epson, and Kodak.

All our cartridges go through a comprehensive quality performance system to ensure they meet or exceed OEM performance. This includes OEM benchmarking, rigorous component and raw material testing, environmental chamber testing, pre and post-production testing and a centralized quality monitoring system to ensure consistent quality and performance.

The Best Choice for the Environment

Remanufactured imaging supplies reduce landfill waste and conserve non-renewable natural resources. Each discarded laser cartridge adds approximately 2.5 pounds of metal and plastic waste to our landfills – waste that will take as long as 1,000 years to decompose. Estimates by industry experts indicate that as many as 100 million laser printer cartridges and 400 million inkjet cartridges are produced each year. Remanufacturing these 500 million cartridges will save an estimated four million cubic feet of landfill space.

Performance Guaranteed

A printer manufacturer CANNOT void a printer warranty due to the consumer's choice to use aftermarket imaging supplies. "Invalidating the warranty would violate the Magnuson-Moss Warranty Improvement Act. It's also an infraction of antitrust laws." In the unlikely event of any damage to a printing mechanism or component caused solely and directly by the use of our products, we will pay the reasonable cost of service and repair.

Want to significantly lower your printing costs? Make the switch! Our products provide the same quality and performance as the OEM brands. Backed by a 100% performance guarantee, it's the easy way to lower your printing costs.
