

Inkjet Cartridges

Simply the Best – Design. Components. Testing.

Our premium inkjet cartridges are priced significantly less than national brand cartridges and are guaranteed to meet or exceed OEM specifications for yield and print quality. Our broad and deep product line includes high quality cartridges for best-selling printer brands including: HP, Canon, Brother, Dell, Lexmark, Epson and Kodak.

All of our remanufactured inkjet cartridges go through a rigorous, 8-step patented manufacturing process. Each step is overseen by experienced quality assurance auditors who test and analyze performance against established benchmarks. This technologically advanced process includes proprietary digital filling and sealing techniques using custom-built robotics equipment. The inks used are specially formulated for each type of cartridge and our filling machines are specifically designed for each type of cartridge to ensure consistent and accurate filling. Finally, each cartridge is thoroughly quality tested to ensure color specifications are met and to make sure there is no smearing or streaking.

With savings of up to 65% over new, and a 100% performance guarantee, these premium inkjet cartridges offer the best alternative to OEM.

Key Benefits

- Remanufactured in a 120,000 square feet inkjet and ink tank manufacturing facility in the USA
- Digitally computerized filling
- Specially formulated ink for each type of cartridge
- Industry-leading automated cleaning process
- Fully IP-cleared product
- 100% cartridge testing in OEM printers
- Environmental chamber testing and OEM benchmark testing
- ISO 9001:2008 certified manufacturing process
